

ALLOTT (NIGERIA) LTD

..... Consulting Engineers

Abeokuta, Ogun State- Nigeria.

Client: Ministry of Works & Housing.

Location: Ogun State - Nigeria.

Project Size: 15.3 Million Naira

Date: 1982

Acting in association with Profen Consultants of Ibadan, Allott (Nigeria) Ltd. was commissioned to undertake a study and prepare a master plan for the collection, treatment and disposal of liquid wastes and surface water in the city of Abeokuta.

The study covered not only the existing population of some 300,000 but also had to take account of the anticipated development of the city - the State Capital - up to the year 2000.

An essential part of the study was the investigation of the centre core of the town where development had taken place without adequate access and where the majority of the people had no alternative sanitation to open ground defecation.

Estimates were made of the existing and future water demands of the area and an evaluation made as to the extent to which the existing water supply system could meet these demands.

The proposals put forward have to take account of the different income groups and their ability to pay for improved conditions.

The study was also concerned with proposals for alleviating flooding which occurred in the wet season due to the dense development that had taken place in the watersheds of the various streams flowing through the city.
